# PSPDFKit

A Quick Overview

Happy Developers, Happy Managers, Happy Customers

When you're developing an app or improving your company's document workflow, PDF support is the last thing you want to worry about. You just want it to work.

That's why PSPDFKit's powerful features are matched by a responsive, experienced and passionate customer support team.

We'll work with you to make sure our PDF framework supports your unique features and integrates with your current system. We'll worry about the boring details so you can focus on the important stuff: making a great product.

Beautifully Designed

We built PSPDFKit using smart, simple and clean design to provide the best user experience. It's easy to use and navigate, so it won't clash with your user interface.

Seamless Integration

PSPDFKit offers a simple and fast ready-made solution. It's easy to add to any project, saving you time to focus on the unique parts of your app. Almost every aspect is customizable to offer maximum flexibility.

Proven Scalability

Our PDF framework grows with you. It's proven across a broad range of clients from start-ups with speciality apps to Fortune 500 companies with enterprise workflows.

Trusted by Companies World-Wide

Over 1000+ customers rely on the versatility and stability of PSPDFKit for PDF support. We're dedicated to providing the best solution for everyone, from boutique app developers to Fortune 500 companies.

Making Your Life Easier

Get up & Running fast

It takes a few lines of code and less than 15 minutes to add PSPDFKit to your project and start using it. Every minute saved is a minute more you can spend working on your app or improving your company's document workflow.

100+ examples to build on

We want you to get the most out of PSPDFKit. And we want users to learn from one another. Which is why we created PSPDFCatalog – a project with over 100 examples of how to implement your own variety of UI or features.

Just the pieces you need

With PSPDFKit, you can pick the specific components you need. We're happy to help you figure out which combination of features is best for you. Learn more about specific features here.

Ready to scale with you

As you grow as a company, your needs from PSPDFKit may grow too. Whether you're a fast-growing startup with a speciality app or an enterprise-level company, you can easily upgrade to more advanced features when you need them.

Built by developers for developers

We know how hard developing an app and integrating new software can be. Our goal is to make your life easier. We believe sharing PDF files should be as pain-free as possible, and the process of supporting PDFs should be too. We developed PSPDFKit to support PDFs so you don't have to.

Not held back by release cycles

We're constantly listening to your requests and improving our product. Our release cycles for minor updates is kept short, allowing us to constantly improve the usability of the framework. PSPDFKit won't hold you back when you're planning your app's release date.

Introduction

Exceptional speed, dependable, and customizable, PSPDFKit can improve any app and is trusted by indie developers, startups, and Fortune 500 companies across the world
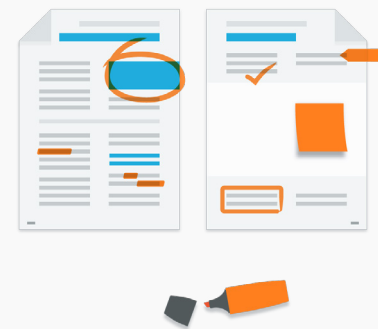

Core Viewer

As the most advanced PDF viewer on the market, the Core Viewer serves as the foundation of our frameworks. It combines exceptional performance with the ability to incorporate various multimedia content, text search and extensive document management features.

Annotations

Using an array of features such as drawings, highlights, notes, or free text annotations is easy with PSPDFKit for Android, which comes with a great style controller that you can customise for your users.

Document Editor

The Document Editor allows users to access a whole host of page editing features, including new page creation, page duplication, reordering, rotation or deletion, as well as creating a new document from pages selected across multiple existing documents.
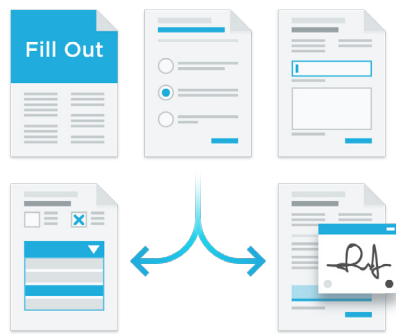

Indexed Full-Text Search

Our indexed search engine allows users to search across multiples documents, languages and encoding types to display near-instant results and can be added on to any of the above component combinations.

iOS-only Features

The following features are currently available on iOS only. Our team is working on ports to the other supported platforms, and we will announce any new developments on our blog.

Forms

By supporting PDF AcroForms, the most commonly used standard, users are able to fill out and submit forms with ease. With our Forms component, a user has the ability to save changes in the PDF or enter valuable information that can be accessed and submitted to a server.

Digital Signatures

As an extension of Forms, with Digital Signatures a user can sign documents using a personal certificate so your app can instantly verify the identity of the user.
